

# USB 3.2 Auto Toggle Switch

**WE9 USB 3.2 Auto Toggle Switch**  
*enables to sharing of all 4 devices  
on the 2 PC/Host.*

- Adopting MTT technology, allows stable and smooth 4x con- current USB connections
- ESD protection on all the USB ports, preventing electric surge damage and data loss.
- Over-voltage protection, effectively preventing other high- voltage power input from damaging the connected devices
- Compatible With OS Including Mac OS, Linux, Windows 11 / 10 / 8.1 / 8 / 7 / XP
- Support External power input to feed high power USB devices .

## Specification

| Model                 | USB3.2 Toggle                                                                     |
|-----------------------|-----------------------------------------------------------------------------------|
| USB Device Ports      | 4 x USB 3.2                                                                       |
| Host/PC               | 2x USB 3.2                                                                        |
| Switching Mode        | Auto with low and High Priority                                                   |
| Data Rate             | up to 5Gbps                                                                       |
| USB Power Output      | 5V@Imax:1.2A, USB-A connector                                                     |
| Operating Environment | 40 ~ 85                                                                           |
| OS Support            | Mac OS (8.6 or above), Linux(2.4.20 or above), Windows 11 / 10 / 8.1 / 8 / 7 / XP |
| External Power        | DC power supply terminal 7~36V                                                    |
